

Treatment Planning Report

Patient Name: Manisha

Date: 06/01/2024

Treating Doctor: Dr. Rishab Sharma

Case ID: 2401071872

Greetings

This is regarding your case Manisha. Thank you for giving us an opportunity to serve you.

The case presents with severe crowding in upper and lower arch with anterior crossbite irt 11.

In lower arch: severe rotation correction is needed irt 43 (approx. 65degree), which is not predictable with aligners. Tooth 43 is also mesially inclined. Angulation correction of the same is not feasible with aligners.

In upper arch: tooth 13 is highly placed. To align the same extrusion of approx. 3.5mm is required which is not feasible with aligners. Retained deciduous is also present irt 63. OPG is required to rule of impaction.

Considering such severity of malocclusion, **Hybrid Treatment is suggested.**

Kindly provide your valuable guidance.
