

**Patient Name: Mr. Hardeep Singh**

**Date: 05/01/2022**

**Treating Doctor: Dr. Vikrant Bhandari**

**Case ID: 2112035040**

**Categorisation of Case: DA-30**

**Active Aligners: U/15, L/15**

**Chief Complaint:**

As per the prescription form, patient complains of malalignment.

**Treatment Plan:**

In the upper arch, spaces obtained from interproximal reduction of 0.3mm per contact irt 13-12, 11-21 and 22-23 will be utilized to align, intrude and retract the upper anteriors.

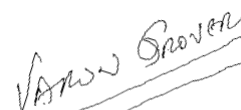

In the lower arch, spaces obtained from 0.2mm handstrip per contact irt 33-32, 32-31, 31-41, 41-42 and 42-43 will be utilized to align, intrude and retract the lower anteriors.

**Note: -**

- For the abovementioned case, the PPF was inadequately filled. Moreover no occlusal or extra oral photographs were provided for the assessment. Kindly make sure you provide with sufficient records for plan accuracy.
- There appears to be a scan discrepancy irt 21 and 43. We are providing with a tentative plan. Kindly provide a rescan for the fabrication of the active aligners.

Kindly use only handstrips to perform above said 0.3mm and 0.2mm IPRs. Attachments may vary during the course of treatment. It is recommended to have proper follow-ups, periodic assessments and records of the case. Kindly provide us your valuable comments on our customised treatment software- "Digiplan". Your comments will be appreciated.

Regards

Dr. Varun Grover

Consultant Orthodontist

B.D.S, M.D.S (Orthodontics)
